PROFESSIONAL SUMMARY

Proactive and analytical Data Science student with hands-on experience in building end-to-end **data pipelines** and **predictive models**. Proven ability to leverage **Python**, **scikit-learn**, and **SQL** for data analysis and ML. Highly skilled in **GenAI** concepts, including developing **RAG architectures**, **prompt engineering** techniques, and leveraging **LLMs** via **API integration** to create novel AI solutions.

TECHNICAL SKILLS

Data Science & ML: Python, Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, XGBoost, Jupyter

GenAI & LLMs: Langchain, RAG Architecture, Prompt Engineering, Vector Databases (ChromaDB), OpenAI API

DevOps & Cloud: Git, GitHub, Docker, Cloud (AWS) [Familiar]

Languages & Databases: SQL, MySQL, C++

PROJECTS

AI-Powered Email Assistant | *Python, LangChain, Streamlit, JSON Parsing* | [GitHub Link](#)

- Engineered an intelligent inbox management tool using **LLMs** (Llama-3 via Groq) to automate email categorization, action item extraction, and drafting.
- Designed a **context-aware Chat Agent** capable of querying the entire inbox by analyzing email metadata and body content.
- Implemented strict **JSON output parsing** to reliably extract tasks and deadlines from unstructured text, ensuring high data integrity for the frontend.
- Demonstrated proficiency in **Prompt Engineering** to control LLM hallucinations and enforce professional tone in auto-replies.

GST Data Analysis & Classification Model | *Python, XGBoost, Scikit-learn* | [GitHub Link](#)

- Built a high-performance classification model to predict tax-related behavior using transactional GSTN data, achieving an **Accuracy of 97.84%**.
- Selected and tuned **XGBoost** after benchmarking against ANN and Random Forest; optimized for **F1-score** to handle class imbalance effectively.
- Conducted extensive hyperparameter tuning (Grid Search/Optuna) to optimize Learning Rate and Max Depth, resulting in a robust AUC-ROC of 0.99.

Student Record Data Analysis Pipeline | *Python, Pandas, Scikit-learn* | [GitHub](#)

- Engineered an end-to-end **data pipeline** to support **ML workflows** for analyzing and predicting trends from large datasets (1000+ records).
- Automated **data processing workflows**, including data cleaning, feature engineering, and exploratory analysis using Pandas and NumPy.
- Trained and optimized regression/classification models, improving accuracy by 15% via hyperparameter tuning.
- Used GitHub for **version control** and collaborative documentation to ensure reproducibility.

EDUCATION

Vellore Institute of Technology, Bhopal

Bachelor of Technology in Computer Science and Engineering

• CGPA: 8.19/10

Bhopal, India

Aug. 2022 – May 2026

TECHNICAL ACHIEVEMENTS

- Solved over 500+ Data Structures and Algorithms problems on platforms like LeetCode and Codeforces.
