PROFESSIONAL SUMMARY

Computer Science engineer with technical proficiency in **Python Development**, **AI/ML Frameworks**, and **Algorithmic Problem Solving**. Experienced in developing secure data processing tools, implementing anomaly detection models for fraud prevention, and automating workflows using LLM architectures. Skilled in building internal compliance applications and optimizing classification algorithms for sensitive data handling.

EDUCATION

Vellore Institute of Technology

Bachelor of Technology in Computer Science and Engineering

Bhopal, India

Aug. 2022 – May 2026

- **CGPA:** 8.19/10
- Relevant Coursework: Data Structures & Algorithms, Machine Learning, Database Management (DBMS), Cryptography Fundamentals.

TECHNICAL SKILLS

Languages: Python, SQL, C++, Java (Basics).

Data Protection & Security: Sensitive Data Classification, PII Redaction, Anomaly Detection, Access Control Concepts.

AI/ML Frameworks: Scikit-learn, XGBoost, Pandas, NumPy, Imbalanced Data Handling, TensorFlow Concepts.

GenAI & Automation: LangChain, RAG Architecture, Groq API, JSON Parsing, Prompt Engineering.

Tools: Git, GitHub, VS Code, Streamlit, Jupyter Notebooks.

PROJECTS

PII Data Redaction Tool | *Python, Streamlit, NLP, Regex* | [GitHub Link](#)

- Developed a web-based **Data Protection tool** using **Streamlit** allowing users to upload documents for automated sensitive data scanning.
- Implemented a detection engine using **NLP and Regex patterns** to identify PII (Personally Identifiable Information) such as emails and phone numbers.
- Engineered a secure file processing pipeline that masks sensitive entities and generates sanitized, **redacted output files** for download.

GST Fraud & Anomaly Detection System | *Python, XGBoost, Scikit-learn* | [GitHub Link](#)

- Built an AI-driven **anomaly detection model** to identify irregular patterns in transactional data, achieving **97.84% Accuracy**.
- Addressed class imbalance using **F1-score optimization**, simulating real-world **breach prevention scenarios** where anomalies are rare events.
- Optimized **XGBoost** hyperparameters (Learning Rate, Max Depth) to minimize false positives, a critical metric for security monitoring systems.

AI-Powered Policy Automation Assistant | *Python, LangChain, Streamlit* | [GitHub Link](#)

- Engineered an automated agent using **LLMs (Llama-3)** to parse and categorize unstructured incoming data streams with strict **JSON output validation**.
- Designed a **context-aware retrieval system (RAG)** capable of querying large datasets to extract specific compliance or action items accurately.
- Demonstrated proficiency in **Prompt Engineering** to prevent hallucinations and ensure reliable data handling protocols.

TECHNICAL ACHIEVEMENTS

- **Competitive Programming:** Solved **500+ Data Structures and Algorithms** problems on LeetCode/Codeforces; demonstrates strong logic required for complex **security algorithm implementation**.
